Boehringer Ingelheim Vetmedica, Inc.

**TECHNICAL**

## **Enterisol® Ileitis**

*Lawsonia intracellularis*

Avirulent Live Culture

### **Guidelines for Best Application**

- STEP 1** Move appropriate number of vaccine bottles from deep freeze to pan, tub, bucket, etc.
- STEP 2** Place container with bottles in sink and immerse in luke warm water bath (60°-70° F) until liquid and completely thawed.
- STEP 3** Administer according to label directions and guidance of your veterinarian. **Product must be used within 6 hours of thawing.** This vaccine must not be refrozen once thawed.

### **Additional Tips:**

Store this vaccine frozen up to the expiration on the label in an Ultralow freezer (-70° C) if available, or for up to 2 weeks in a **non** “frost-free” freezer (-20° C). Do not allow to thaw until ready to vaccinate. Once thawed, use entire contents. Vaccine can not be refrozen for later administration.

Keep records of all vaccines administered. At a minimum, these should include: date, individual/pen/lot ID, number of head vaccinated, product(s) given, and route of administration.
