

# Calvenza™ -03 EIV/EHV

## Equine Rhinopneumonitis-Influenza Killed Virus Vaccine

### Description

Calvenza™ -03 EIV/EHV is an Equine Rhinopneumonitis-Influenza Killed Virus Vaccine.

### Features

Incorporates the latest emerging North American EIV strain (Ohio/2003), as well as an established North American EIV strain (Kentucky/2/95).

Also incorporates a relevant Eurasian EIV strain (Newmarket/2/93).

Unique EHV-1 equine respiratory origin isolate.

Stimulates antibody to EHV-1 & EHV-4.

Novel adjuvant.

Safe, all killed vaccine.

Includes innovative pliable nasal applicator.

### Benefits

Flexible dose administration.

Three dose regimen conforms to AAEP recommendations.

No reversion to virulence concern.

Minimal vaccine site reactions.

### Dosage & Administration

Using aseptic technique inoculate horses IM with a 2 mL dose. Administer a second 2 mL dose IM in 3-4 weeks using a different injection site. Administer a third 2 mL dose in 3-4 weeks either IM or IN. Revaccinate annually and prior to anticipated exposure either IM or IN.

### Precautions

Store at a temperature between 35° - 45° F (2° - 7° C). Protect from freezing. Shake well before using. Do not vaccinate within 21 days of slaughter.

Antidote: Epinephrine.

### Highlights

- First killed virus vaccine to include the latest North American strain to be identified (Ohio/2003).
- Relevant types, quantities of EIV & EHV antigens with a novel adjuvant.
- Flexible routes of administration.
- Safe for use in pregnant mares.

### Uses

For the vaccination of healthy, susceptible horses 6 months of age or older, including pregnant mares, as an aid in the reduction of respiratory disease due to equine herpesvirus type 1 (EHV-1) and type 4 (EHV-4) and by equine influenza type A<sub>2</sub>.

### Warning

This product has been tested under laboratory conditions and shown to meet all Federal standards for safety and efficacy in normal, healthy, immunocompetent animals. This level of performance may be affected by conditions such as stress, weather, nutrition, disease, parasitism, other treatments, individual idiosyncrasies or impaired immunological competency. These factors should be considered by the user when evaluating product performance or freedom from reactions.

### Product Information

Name	Code	Size
Calvenza™-03 EIV/EHV	132-615	2 mL 1 dose
	132-625	20 mL 10 doses

**Equine  
Rhinopneumonitis-  
Influenza Vaccine**

Killed Virus

**Calvenza™ -03 EIV/EHV**

1 Dose/2 mL

**Indications:** For the vaccination of healthy, susceptible horses 6 months of age or older, including pregnant mares, as an aid in the reduction of respiratory diseases caused by equine herpesvirus type 1 (EHV-1) and type 4 (EHV-4), and by equine influenza virus types A2 North American and A2 Eurasian.

**Administration and Dosage:** Shake well before use. Using aseptic technique, inoculate horses intramuscularly with a 2 mL dose. Administer a second 2 mL dose intramuscularly in 3-4 weeks using a different injection site. Administer a third 2 mL dose in 3-4 weeks by either the intramuscular or intranasal route. Revaccinate annually and prior to anticipated exposure, by either the intramuscular or intranasal route.

**For Veterinary Use Only**
