

Calvenza™-03 EIV

Equine Influenza Killed Virus Vaccine

Description

Calvenza™-03 EIV is an Equine Influenza Killed Virus Vaccine.

Features

Incorporates the latest emerging North American EIV strain (Ohio/2003), as well as an established North American EIV strain (Kentucky/2/95).

Also incorporates a relevant Eurasian EIV strain (Newmarket/2/93).

Novel adjuvant.

Safe, all killed vaccine.

Includes innovative pliable nasal applicator.

Benefits

Flexible dose administration.

Three dose regimen conforms to AAEP recommendations.

No reversion to virulence.

Minimal vaccine site reactions.

Dosage & Administration

Using aseptic technique inoculate horses IM with a 2 mL dose.

Administer a second 2 mL dose IM in 3-4 weeks using a different injection site. Administer a third 2 mL dose in 3-4 weeks IM or IN. Revaccinate annually and prior to anticipated exposure IM or IN.

Precautions

Store at a temperature between 35° - 45° F (2° - 7° C). Protect from freezing. Shake well before using. Do not vaccinate within 21 days of slaughter. Antidote: Epinephrine.

Uses

For the vaccination of healthy, susceptible horses 6 months of age or older, including pregnant mares, as an aid in the reduction of respiratory disease due to equine influenza type A₂ virus.

Warning

This product has been tested under laboratory conditions and shown to meet all Federal standards for safety and efficacy in normal, healthy, immunocompetent animals. This level of performance may be affected by conditions such as stress, weather, nutrition, disease, parasitism, other treatments, individual idiosyncrasies or impaired immunological competency. These factors should be considered by the user when evaluating product performance or freedom from reactions.

Highlights

- First killed virus vaccine to incorporate latest North American (Ohio/2003) EIV A₂ strain.
- Flexible routes of administration.
- Proven safe with minimal vaccine site reaction.
- Safe for use in pregnant mares.

Product Information

Name	Code	Size
Calvenza™-03 EIV	132-515	2 mL 1 dose
	132-525	20 mL 10 doses

See carton for complete information.

Indications: For the vaccination of healthy, susceptible horses 6 months of age or older, including pregnant mares, as an aid in the reduction of respiratory disease caused by equine influenza virus types A2 North American and A2 Eurasian.
