

Calvenza™ EHV

Equine Rhinopneumonitis Killed Virus Vaccine

Description

Calvenza™ EHV is Equine Rhinopneumonitis Vaccine Killed Virus Vaccine.

Features

Unique EHV-1 equine respiratory organ isolate.

Stimulates antibody to EHV-1 & EVH-4.

Proven efficacious against EHV-1 & EHV-4 in challenge studies.

Novel adjuvant.

Safe, all killed vaccine.

Includes innovative pliable nasal applicator.

Benefits

Aids in reduction of respiratory disease caused by EHV-1 & EHV-4.

Flexible dose administration.

No reversion to virulence concern.

Minimal vaccine site reactions.

Three dose regimen conforms to AAEP recommendations.

Advantages

Calvenza™ EHV is proven safe.

Calvenza™ EHV is proven effective by challenge.

Dosage & Administration

Using aseptic technique inoculate horses IM with a 2 mL dose. Administer a second 2 mL dose IM in 3-4 weeks using a different injection site. Administer a third 2 mL dose in 3-4 weeks either IM or IN. Revaccinate annually and prior to anticipated exposure, either IM or IN.

Precautions

Store at a temperature between 35° - 45° F (2° - 7° C). Protect from freezing. Shake well before using. Do not vaccinate within 21 days of slaughter.

Antidote: Epinephrine.

Uses

For the vaccination of healthy, susceptible horses 6 months of age or older, including pregnant mares, as an aid in the reduction of respiratory disease due to equine herpesvirus type 1 (EHV-1) and type 4 (EHV-4).

Warning

This product has been tested under laboratory conditions and shown to meet all Federal standards for safety and efficacy in normal, healthy, immunocompetent animals. This level of performance may be affected by conditions such as stress, weather, nutrition, disease, parasitism, other treatments, individual idiosyncrasies or impaired immunological competency. These factors should be considered by the user when evaluating product performance or freedom from reactions.

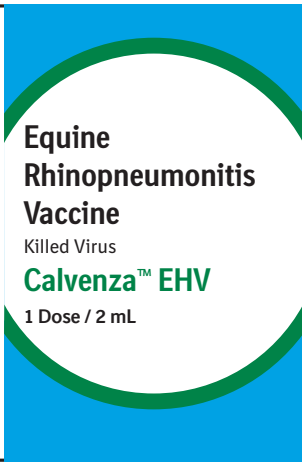

Highlights

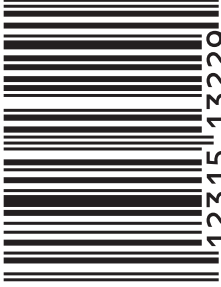

- Unique EHV-1 antigen & novel adjuvant.
- Proven efficacious against EHV-1 & EHV-4 by challenge studies.
- Flexible routes of administration.
- Proven safe with minimal vaccine site reaction.
- Safe for use in pregnant mares.
