

# Naramune-2™

## Canine Parainfluenza-Bordetella Bronchiseptica Vaccine

### Description

Canine Parainfluenza-Bordetella Bronchiseptica Vaccine. Naramune-2™ is a modified live virus, avirulent live culture. Contains neomycin as a preservative.

### Features

Packaged 20 x 1 mL container or 1 x 5 dose vial.

Intranasal administration.

Variable reconstitution directions.

Partial protection in 48 hours; complete protection in 72 hours.

Administration in one or both nares.

Nasal applicator tips included with every package.

Rapid onset of immunity.

### Benefits

Easy-to-use. Variable dose volume.

Safe to use in puppies as young as three weeks of age.

Convenient intranasal administration.

### Advantages

Rapid, safe canine cough protection for puppies as young as three weeks of age. Intranasal application makes it convenient and easy-to-use.

### Dosage & Administration

Using aseptic technique, rehydrate the freeze-dried vaccine to the desired dose volume with the accompanying sterile water diluent. Shake well and use at once. Do not vaccinate puppies under 3 weeks of age. Puppies vaccinated between 3 and 6 weeks of age should be revaccinated at 6 weeks. Annual revaccination is recommended.

### Precautions

Store out of direct sunlight at a temperature not over 45° F (7° C). Use entire contents when first opened. Burn containers and all unused contents. Anaphylactoid reactions may occur.

Antidote: Epinephrine.

### Uses

Naramune-2 is recommended for vaccination of healthy, susceptible dogs and puppies against canine cough caused by canine parainfluenza and *B bronchiseptica*.

### Warning

For intranasal use in dogs only. Do not vaccinate dogs parenterally.

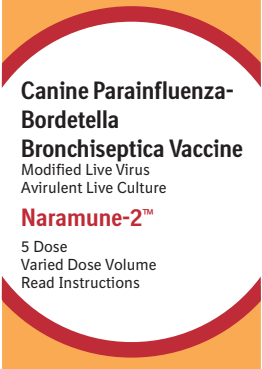

### Highlights

- Safe for use in puppies as young as three weeks of age.
- Intranasal administration.
- Rapid onset of immunity against canine parainfluenza and *B bronchiseptica*.
