1. LOW DOSE
A 5 mL dose per 550 pounds of body weight reduces product waste, provides more accurate dosing, and allows for less processing time and stress.

2. ECONOMICAL
Unlike Safe-Guard®, SYNANTHIC controls Ostertagia ostertagi (L4 and inhibited L4 stages) and tapeworms without the need for doubling the label dosage (and the cost).

3. CONVENIENT
With just one squeeze from the applicator per head, drenching is complete.

4. FAST AND LONG-LASTING
SYNANTHIC is applied straight to the gut, where the worms are, unlike avermectins that can take five days to reach peak blood levels. Compared to Safe-Guard®, SYNANTHIC stays in the gut longer, providing more time to come in contact with and kill internal parasites.

5. EFFECTIVE
Demonstrated efficacy against major intestinal parasites including O. ostertagi (L4 and inhibited L4 stages) and tapeworms.

Get more deworming with less dewormer at SYNANTHIC.com.

To learn more about how Synanthic® and our new applicator gun can ease your deworming process, contact your Boehringer Ingelheim representative or visit SYNANTHIC.com.

SYNANTHIC RESIDUE WARNINGS:
Cattle must not be slaughtered until seven days after treatment. Because a withdrawal time in milk has not been established, do not use in female dairy cattle of breeding age.
