Indications: Recommended for the vaccination of healthy, susceptible swine 3 weeks of age or older as an aid in the reduction of enzootic pneumonia of swine caused by Mycoplasma hyopneumoniae.

Composition: Prepared from chemically inactivated cultures of M. hyopneumoniae, combined with an adjuvant to stimulate the immune response.

Directions and Dosage: Shake well before use. Using aseptic technique, inject a single 1 mL dose intramuscularly. The duration of immunity is at least 26 weeks. Semi-annual revaccination is recommended for breeding swine.
