TREATMENT OF CATTLE FOR HORN FLIES

1. Remove infected cattle from the pasture. For best results, spray the entire pasture with a long-lasting control program such as Pyrethrin-based products. For more information, contact your veterinarian.

DOSE

- Do not use on pregnant or lactating cattle.
- Apply only to cattle that are free from external parasites.

ADMINISTRATION

- Use a long-lasting control program such as Pyrethrin-based products.
- Apply the full dose rate of the product to the entire pasture.
- Do not use in areas where Pyrethrin products are contraindicated.

WARNING

- Do not use on cattle that are pregnant or lactating.
- Do not use on cattle that are free from external parasites.

PRECAUTIONS

- Do not use on cattle that are pregnant or lactating.
- Do not use on cattle that are free from external parasites.
- Do not use on cattle that are allergic to Pyrethrin products.
